

## Oman - Onshore

### Issue

- Flash Gas generated due to condensate flashing in wet condensate drum. Potential flaring or install new compressor

### Solution

- Installed two 3" SJPs using 800,000scfd HP gas as motive force from compressor at 94 bara
- Boosted 700,000scfd of LP gas by 4bar
- Stand-by unit for depletion conditions

### Benefits

- Flash gas recovered and recycled back to process
- Eliminated need for separate compressor
- Achieved both commercial and environmental objectives
